The Department of Geography actively engages in several green initiatives to foster environmental sustainability. Regular **cleaning activities** are conducted within the campus and surrounding areas, involving both students and faculty to promote environmental hygiene and community care. The department also celebrates important environmental days such as **World Water Day, World Earth Day**, and World Environment Day, organizing seminars, workshops, and **awareness campaigns** to highlight the importance of environmental conservation. In addition to these efforts, environmental topics are integrated into the curriculum, ensuring students learn about sustainable practices as part of their academic experience. Other initiatives include recycling and waste management programs aimed at reducing the department's environmental footprint, as well as tree-planting drives that contribute to reforestation and raising awareness about afforestation. Additionally, workshops on topics such as water conservation, renewable energy, and waste reduction equip students with the tools to advocate for and implement sustainable practices in their daily lives. Through these initiatives, the department fosters a culture of sustainability and environmental responsibility.
