- The open Economy IS curve:
 - $Y = C + I + G + NX$
 - Where NX stands for net exports, i.e., exports minus imports
- Determinants of NX:
 - Income of the domestic country
 - Higher the domestic economy's income, smaller will be NX.
 - Income of the foreign country
 - Higher the foreign economy's income, larger will be NX.
 - Exchange rate – the amount of domestic currency required to purchase one unit of foreign currency, e.g., exchange rate of Indian rupee against dollar is 83.

Macroeconomic Policies in an Open Economy: The Mundell-Fleming Model

- The Mundell-Fleming model analyses the effects of macroeconomic policies on output in an open economy set up.
- The model can be discussed under different assumptions relating to capital mobility and exchange rate regime:
 - (a) Macroeconomic policies when there is imperfect capital mobility which can again be analyzed under two considerations regarding the exchange rate regime – fixed exchange rate and flexible exchange rate.
 - (b) Macroeconomic policies when there is perfect capital mobility which can again be analyzed under two considerations regarding the exchange rate regime – fixed exchange rate and flexible exchange rate.
- We will consider effectiveness of monetary policy and fiscal policy under flexible exchange rate with perfect capital mobility.
